

ONE-SHOT

DESCRIPTION

Fine-grain, creamy rubbing compound.

It can be used both as a cutting and as a finishing rubbing compound; it does not leave streaks or sanding marks.

Suitable for use both on recently applied coatings, if well cured, and on old, hard coatings.

Formula with a wide range of applications, suitable for polishing cars, boats and GRP surfaces.

Free from silicone oils.

CHARACTERISTICS

Base: emulsion

Appearance: creamy paste

Colours: white

APPLICATION

Machine application with rotary polisher, on honeycomb sponge pad such as our code 86753 (white) or 86751 (yellow) depending on the substrate conditions.

It can be applied by hand. Pour a moderate amount of product onto cotton wool or a soft cloth. Rub with circular movements, trying to press down as evenly as possible. The pressure exerted determines the abrasion intensity.

When finished, use a microfibre cloth such as code 48370 (orange) to remove residues and to clean the surface.

If desired, you can apply a polish with the sole function of increasing protection.

The effectiveness of our products is based on practical experiences and research work carried out in our laboratories; nevertheless we accept no liability for work carried out following our instructions being clear that the final result depends in all cases on a series of unforeseeable factors.
